

ULTRA-fresh™ Kills MRSA

Visual Blinds have supplied blinds, curtains and cubical tracks to the Health Authority sector since 1992. We are currently supplying ULTRA-fresh- the unique antimicrobial coating that prevents the spread of MRSA.

Blinds and curtains that have been treated with ULTRA-fresh have shown 100% contact inhibition against MRSA (A.A.T.C.C. TEST METHOD 147-1998- Staphylococcus aureus (ATCC#33591). Source: Thompson Research Associates, 95 King Street East, Toronto, Ontario, Canada. M5C)

ULTRA-fresh treated fabrics help maintain a sterile environment whilst providing an effective and efficient form of privacy and adjustable solar shading.

Cubical curtains that guarantee a sterile germ free surface for many years to come.

ULTRA-fresh provides vertical blinds, roller blinds and curtains with effective antibacterial, and antifungal properties that preserve hygienic freshness permanently.

The fabrics will inhibit growth of odour causing bacteria, fungi, mold and mildew producing a self deodorizing surface.

performance fabrics

The fabrics are easy to maintain and will retain their sterile properties even after washing.

I will be contacting you shortly to see if we can help you in your fight against MRSA.

Yours faithfully

Zen Dyson
